

# Thought of the Day

**We are in the early stages of a “Freshwater Crisis” (Scientific American, August 2008)**

**Today one out of six people (> 1 billion) have inadequate access to water.**

**By 2050, as much as  $\frac{3}{4}$  of the earth’s population could face scarcities of water.**

**What is minimum amount of water each person requires per year for drinking, hygiene and growing food?**

**Water is minimum amount of drinking water each person requires per year?**
